PROF BUILDING FOIL TAPE FLEX

Structure

Building foil tape Flex is a P-marked, reinforced building foil tape/allround tape that has very strong adhesion. The tape consists of LD polyethylene coated with an acrylate adhesive. The tape is UV-resistant and approved for indoor and outdoor use. The aging resistance is at least 50 years.

Area of use

Building foil tape Flex is primarily used to air- & moisture-proof joints and penetrations. The tape has good adhesion to PP films (non woven), PE films, wind protection boards, facade boards/fibre cement boards, aluminum boards, wooden boards, OSB boards, gypsum boards, non-waxed cardboard and a range of other substrates.

The tape is approved for sealing Air & Vapor Barriers/Vapor Brakes. It is also approved for sealing Wind protection on the outside of the frame.

The tape is excellent for joints, penetrations, repairs and seals over fastening with staples/nails.

Environment

The tape contains no solvents, heavy metals or halogen.

To think about

The substrate must be clean, dry, smooth and grease-free during application. The tape is elastic. When applying, the tape must not be stretched unnecessarily because it always tries to return to its original shape.

Storage

The tape should be stored at + 5° – + 25° C for the best possible adhesion. The tape works well against cold surfaces in very low temperatures as long as it is stored according to the recommendations before use. The tape should be stored so that it is not exposed to UV radiation.

SIZE: 50MM x 25M (12 PCS/BOX)

60MM X 25M, SPLIT LINER (10 ST/BOX)

75MM X 25M (8 ST/BOX)

WEIGHT: APPROX. 6.5 KG/BOX

THICKNESS: APPROX 0.35 MM

TEMPERATURE RESISTANCE: -40° C – +80° C

OPTIMAL APPLICATION TEMPERATURE: +5° C - +25° C

VAPOR IMPERMEABILITY: >1,5 x 106 S/M (sd: >40m)

BREAK ELONGATION: >100%

ADHESION STRENGTH: CA 35N/25MM
